

SurePrep front-end coding challenge

1. Here's the link to the app –

<http://sureprep-frontend-coding-challenge.s3-website-us-east-1.amazonaws.com/>

2. Here's the demo of the app –

Basically the app allows you to look up airports and airlines for different cities around the world.

<https://s3.amazonaws.com/sureprep-frontend-coding-challenge/demo.mov>

3. Here's are the items we would like you to build automated test scripts for –

- a. Search "m" and verify there are 3 results each for inbound and outbound destinations. Bonus for verifying their airport code: JNB, BOM and SYD.
- b. Search "Lon" and verify the result is "London, UK". Verify there are 2 outbound flights and 3 inbound flights. Bonus for verifying location (51°28'14.2"N 0°27'43.0"W) in google maps.

4. When done – you can upload your code (test cases and test scripts) to any cloud app like Google Drive, Dropbox or GitHub, etc. and send us the link to review.

Note – use any back-end language you are comfortable with, but please mention the language you use.
